Build Sustainable Financing and Partnerships for Girls and Women

Facts, Solutions, Case Studies, and Policy Recommendations

OVERVIEW

Donor investments targeting girls’ and women’s health, rights, and wellbeing have lagged in recent years and more work needs to be done to improve the lives of girls and women, thus enabling communities and nations to unlock their full potential. Under the new sustainable development agenda, development actors from across the spectrum have an opportunity to abandon traditionally siloed approaches and work together to positively impact girls’ and women’s lives through financial investment and strengthened multi-sector partnerships that deliver on an integrated agenda. This policy brief identifies interventions that can propel sustainable progress.

SECTION 1: FRAMING THE ISSUE

Despite the needs and challenges that girls and women face accessing healthcare, education, resources, and equal opportunities in the workforce and political arenas, investments to empower, engage, and open access for girls and women remain insufficient. While it is encouraging to see the number of commitment makers and partnerships devoted to girls’ and women’s health, rights, and wellbeing increase, the commitments by and partnerships between governments, donor agencies, NGOs, and the private sector have not been sufficient to close the gender equality gap and provide key opportunities to spur development across communities and countries.

While donor investments targeting girls and women have increased, they still miss the mark. Formal development aid commitments targeting gender equality and women’s empowerment tripled from $10 billion in 2002 to $30 billion in 2014. However, these commitments were not cross-cutting, but funneled into siloed sectors, such as education and health. In 2013 and 2014, for example, only 2% of bilateral aid allotted to women’s economic empowerment targeted gender equality as a primary aim.

Further, more long-term commitments from donors and countries alike need to be made so that funding is sustained and predictable. Funding specifically dedicated to women’s civil society organizations and institutions was less than $200 million in 2014, in spite of overall increased in aid targeting gender equality. Many organizations promoting the rights of girls and women depend on support from private foundations and donors that do not span multiple years. This hinders their ability to develop long-term programs with meaningful impact.

Governments also need to step up support through expanding financing across areas influencing the health, rights, and wellbeing of girls and women and ensuring a fair share of the GDP is spent on issues like universal health coverage and access to sexual and reproductive health services. In 2013, for example, less than 0.4% of national budgets in 13 developing countries was allocated to ministries or agencies that addressed girls’ and women’s development and empowerment. 73% of the global population also lacks government-funded social protection coverage, and as extreme poverty disproportionately affects women, this absence of a safety net hits them hardest. By building their capacity to enforce taxation, governments in developing countries can capture an estimated $213 billion in tax revenue lost annually as a result of tax dodging. This would enable authorities to invest in social and economic support across sectors.

The private sector is actively engaged in advancing gender equality and recognizes both their ability to address the unique challenges that girls and women face and the business benefits of investing in women’s rights, health, and wellbeing. Between 2005 and 2020, for example, $14.6 billion of private sector-pledged funding prioritizes girls and women. In addition, almost 1,500 companies globally have signed onto the Women’s Empowerment Principles’ CEO statement of support committing to making progress for women across the workplace, marketplace, and community. Despite these commitments, much progress remains to be made. Women continue to face significant obstacles to gaining quality employment and leadership roles within the private sector, particularly in Asia, the Middle East, and North and sub-Saharan Africa, where there is a significant gap between men and women in the labor force.17 Pay gaps persist across many industries and women continue to face difficulty accessing products and services that could improve their health and wellbeing and that of their families. The private sector has a wide-ranging role to play in advancing women—who represent their employees, producers, suppliers, partners, and community members—and much to gain.

SDG Goal 1: End poverty in all its forms everywhere

- 1.a Ensure significant mobilization of resources from a variety of sources, including through enhanced development cooperation, in order to provide adequate and predictable means for developing countries, in particular least developed countries, to implement programmes and policies to end poverty in all its dimensions

SDG Goal 3: Ensure healthy lives and promote wellbeing for all

- 3.8 Achieve universal health coverage, including financial risk protection, access to quality essential health-care services, and access to safe, effective, quality, and affordable essential medicines and vaccines for all

SDG Goal 5: Achieve gender equality and empower all women and girls

- 5.4 Recognize and value unpaid care and domestic work through the provision of public services, infrastructure, and social protection policies and the promotion of shared responsibility within the household and the family as nationally appropriate
The goal of the Global Financing Facility (GFF) is to end preventable maternal, newborn, child, and adolescent
education, nutrition, water, sanitation, and hygiene programs. The newly-updated Global Strategy, launched in 2015, has incorporated lessons learned and new evidence in the field to more effectively address the health needs of women, children, and adolescents. The strategy has a new focus on newborns, adolescents, and those living in fragile and conflict settings. Building on the recognition of the SDGs that a sustainable future will require cross-sectoral collaboration, the EWEC Global Strategy also calls for intersectional interventions, including strengthening health systems, insurance coverage, education, nutrition, water, sanitation, and hygiene programs.

Case Study: Every Women Every Child (EWEC)

Every Woman Every Child is a global movement to intensify commitment and collective action by governments, the United Nations, multilaterals, the private sector, and civil society to ensure that women, children, and adolescents are at the heart of development. EWEC is focused on mobilizing coordinated efforts across all sectors to enact the Global Strategy for Women’s, Children’s, and Adolescents’ Health (2016-2030), which is completely aligned to the SDGs and provides a roadmap to ensure women, children, and adolescents not only survive, but that they thrive and transform their communities, delivering on the promises of a sustainable future for all. Since the launch of EWEC and the first Global Strategy in 2010, there has been significant progress for women’s, children’s, and adolescents’ health, including:

- 15 million children have been covered by oral rehydration therapy and zinc treatment for diarrhea
- Exclusive breastfeeding has increased by 44%25
- 11 million additional women have given birth in a health facility
- 8.4 million more girls and women use modern contraception
- 67% of HIV-positive pregnant women received antiretroviral medicines in 2013, up from 48%, improving maternal health and preventing HIV transmission

The newly-updated Global Strategy, launched in 2015, has incorporated lessons learned and new evidence in the field to more effectively address the health needs of women, children, and adolescents. The strategy has a new focus on newborns, adolescents, and those living in fragile and conflict settings. Building on the recognition of the SDGs that a sustainable future will require cross-sectoral collaboration, the EWEC Global Strategy also calls for intersectional interventions, including strengthening health systems, insurance coverage, education, nutrition, water, sanitation, and hygiene programs.

Case Study: Global Financing Facility

The goal of the Global Financing Facility (GFF) is to end preventable maternal, newborn, child, and adolescent

SDG Goal 10: Reduce inequalities within and among countries

- 10.4 Adopt policies, especially fiscal, wage, and social protection policies, and progressively achieve greater equality
- 10.5 Improve the regulation and monitoring of global financial markets and institutions and strengthen the implementation of such regulations
- 10.6 Ensure enhanced representation and voice for developing countries in decision-making in global international economic and financial institutions in order to deliver more effective, credible, accountable and legitimate institutions
deaths and improve the health and quality of life of women, adolescents, and children, preventing up to 3.8 million maternal deaths, 101 million child deaths, and 21 million stillbirths in high-burden countries by 2030.\textsuperscript{10} The GFF aims to marshal more than $57 billion between 2015 and 2030 by generating efficiencies through smart financing, by crowding in additional domestic resources and strengthening country ownership, and by further mobilizing development assistance for health and improving coordination of this assistance.\textsuperscript{11} The current development of the GFF incorporates both direct and indirect pathways to improving sexual and reproductive health and rights. Direct pathways include delivering interventions such as providing contraceptives, aligning efforts of healthcare providers, and raising awareness, along with integrating the delivery of services.\textsuperscript{12} Indirect pathways include creating stronger, more resilient healthcare systems and working toward health financing reform.\textsuperscript{13} These broad efforts aim to solve health system bottlenecks in order to allow for sustainable improvement of women's health outcomes in the long term.\textsuperscript{14} 

Support Country-Level Capacity Building and Accountability for Taxation and Budgeting 

National fiscal resources are essential for financing and achieving gender equality. To that end, public spending must reflect girls’ and women’s needs and priorities, and should be tracked to measure its impact on gender equality and women’s rights. Governments can do this by: 1) Developing fair and progressive tax systems that address gender biases in tax policies;\textsuperscript{16,17} 2) Developing tax incentives to support women’s ownership of land, businesses, and resources;\textsuperscript{18,19,20} 3) Accurately pricing and allocating resources for national policies, strategies, and plans focused on gender equality across the public sector;\textsuperscript{21} and 4) Integrating these domestic initiatives with sustainable development financing strategies.\textsuperscript{22}

The international community must also hold one another accountable for national taxation enforcement. The U.N. Committee mandated to oversee compliance with the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) recently criticized Switzerland for its financial secrecy policies, which allow for and encourage wealthy individuals to avoid taxation.\textsuperscript{23} When large amounts of tax revenue are lost due to wealthy individuals avoiding taxation, governments are forced to cut public services, which disproportionately affects women.\textsuperscript{24,25}

Case Study: Gender Responsive Budgets in Nepal 

The government of Nepal integrated a gender perspective within budget planning, implementation, and monitoring, the goal of which is to make the government and its programs responsive to the needs of girls and women.\textsuperscript{26} Through this process, gender responsive allocations in the budget increased from US$1.13 to 1.36 billion between 2013 and 2015.\textsuperscript{14,49}

Case Study: Strengthening Health Financing Accountability in Sierra Leone 

The government of Sierra Leone’s national health sector budget allocation.\textsuperscript{30-32} E4A-MamaYe worked with Save the Children, Budget Advocacy Network, the Freetown Water, Sanitation and Hygiene Consortium, and other civil society members of the Budget Advocacy Working Group on a nationwide health budget advocacy campaign.\textsuperscript{33-35} The campaign, which coincided with the 2012 general elections, called for increased allocation, efficiency, and transparency of spending for mothers and children.\textsuperscript{35-37} As part of the campaign, E4A-MamaYe produced district health budget tracking scorecards.\textsuperscript{34,37} These scorecards presented Ministry of Finance data on the allocation and disbursement of health funds.\textsuperscript{38,39} They were written using simple, non-technical language so that citizens could understand the key messages and take action.\textsuperscript{40,41} Thousands of scorecards were shared at district electoral forums attended by political candidates, community members, and health activists.\textsuperscript{42,43} Since the 2012 election, the proportion of the total government budget allocated to health increased from 7% in 2012 to 11% in 2014.\textsuperscript{44,45} Despite this positive impact of the scorecards, transforming political commitments into implementation has been challenging, and accountability remains a long-term process.\textsuperscript{46,47}

Develop National and Sub-National Systems of Social Protection, Taxation, and Redistribution That Are Gender-Sensitive 

Supporting the development of social protection and redistribution to mitigate increasing inequalities within and among countries is vital for sustainable development.\textsuperscript{48} With strong tax and budgeting systems, governments can invest in social transfers—including for health coverage, family allowances, unemployment benefits, and pensions—that protect women, men, and young people facing poor health, unemployment, unpaid care responsibilities, and old age.\textsuperscript{49} Social policies that target women, like cash transfers and child care support, need to be designed to address the most socioeconomically disadvantaged without reinforcing gender stereotypes or stigmatizing need. Collecting data and monitoring these programs should be robust and disaggregated at all levels in order to effectively reach those most in need.\textsuperscript{50}

Case Study: Peru’s Haku Wiñay Program 

Cash transfer programs contribute to reducing the level of vulnerability that rural women face. Haku Wiñay / Noa Jayatai is a productive inclusion program aimed at the poor in rural areas of Peru.\textsuperscript{46-48} It is managed by FONCODES and was created in 2012 with the objective of improving household income and living standards by strengthening family production systems and improving access to local markets.\textsuperscript{51} The four components of
the program’s implementation were: strengthening family production systems by providing assets and technical assistance; promoting rural entrepreneurship; promoting healthy households through training about nutrition, safe water, and waste management; and financial education.54 The promotion of entrepreneurial initiatives under this program has had positive results in increasing women’s engagement in income-generating activities and in strengthening their productive capacities.55 As of May 2017, households saw a 16% increase in access to local markets to sell produce, and gross production value for self-consumption increased 150%.56 Overall, household income increased by 7%.57 This program promotes resilient livelihoods and sustainable gender equality outcomes through the promotion of inclusive rural businesses, the formation of rural organizations and cooperatives, the consolidation of productive family-based systems, and financial literacy.79

Case Study: Brazil’s Bolsa Familia
Through Brazil’s Bolsa Familia program, qualifying families receive a small monthly cash transfer—distributed directly to the female head of household,—in exchange for keeping children in school and taking them to regular health checks.80 The program was spearheaded with support from both the World Bank and the Brazilian government82 and has contributed to the rapid reduction of poverty in Brazil—accounting for up to 25% of Brazil’s reduction in inequality and 16% of the drop in extreme poverty.83 These promising outcomes have directly contributed to intergenerational development and economic growth.84

Case Study: Malawi’s Zomba Program
The Zomba Cash Transfer Program provides monetary incentives, in the form of school fees and cash transfers, to schoolgirls and recent dropouts on the condition that they stay in or return to school.85 The intervention was designed as a randomized control trial to assess its effectiveness, and evaluations showed that these transfers bore significant results.86 For program beneficiaries who had been out of school, the probability of getting married declined by 40% and the probability of becoming pregnant declined by 30%.87 The onset of sexual activity was 38% lower among all program beneficiaries than among their peers.88 This program shows that, with the right combination of incentives, cash transfers can be a powerful tool not only to keep girls in school, but to also positively impact their sexual and reproductive health.89

Effectively Engage Private Sector Actors and Private Financing in Partnerships for Development
The private sector has a significant role to play in financing for development, particularly in terms of creating jobs, strengthening infrastructure, and providing technologies and services key to social development, including along the supply chain.90 Yet some companies have had a negative impact on women’s rights in the workforce, and the privatization of health services has, historically, limited access to quality, affordable healthcare.91 To increase collaboration and improve business practices, some private sector companies and foundations have started to work closely with governments and civil society to identify new ways to provide goods and services to vulnerable populations, support financial inclusion for women, and improve their lives across the value chain.

Case Study: Mobile Banking in Tanzania
Through a supportive partnership between The MasterCard Foundation and FINCA, an organization that works to alleviate poverty by operating a network of microfinance initiatives in 23 countries, a mobile banking project was initiated in Tanzania.92 Since its implementation, over one-third of the FINCA clients in Tanzania now have access to and are utilizing banking services and saving deposits.93 Mobile banking provides many added benefits, including less travel time, timely deposits, and lowered risks associated with traveling with cash.94 FINCA Tanzania also worked with mobile operators to reduce the costs and provide effective transactions.95 Through these partnerships, The MasterCard Foundation and FINCA look forward to passing along their best approaches and lessons learned and helping other microfinance institutions effectively implement similar programming.96

Case Study: Expanding Microfinance, Empowerment, and Economic Growth
In Pakistan, the Kashf Foundation has been providing finance to low-income women and their families since 1996.97 Today, the program has grown to service over 300,000 families and provides $202 million in loans to women, and has also grown to connect girls and women to essential information and services, aiming to comprehensively empower women.98 Since its implementation, Kashf has impacted over 1 million individuals and their families and now boasts over 150 branches throughout Pakistan.99 Over the past year, two-thirds of clients who have been a part of Kashf for four years or more reported an increase in their savings.100

SECTION 3: THE BENEFITS OF INVESTMENT
Evidence shows that financing women’s health, rights, and wellbeing can ensure stability and longevity as well as catalyze the growth and efficiency of development initiatives. At the same time, cross-sector partnerships incorporate the participation of the most vulnerable, promoting truly sustainable development. All sectors should evaluate their investments through a gender lens so that gender equality is maintained as a long-term goal. If all stakeholders invest wisely in the promotion of gender equality, leveraging the strengths of key players across sectors, countries will benefit from economic growth.

Convening expertise and resources in support of equality for girls and women reaps tangible benefits

• 17.9 Enhance international support for implementing effective and targeted capacity-building in developing countries to support national plans to implement all the sustainable development goals, including through North-South, South-South, and triangular cooperation

• 17.16 Enhance the global partnership for sustainable development, complemented by multi-stakeholder partnerships that mobilize and share knowledge, expertise, technology, and financial resources, to support the achievement of the sustainable development goals in all countries, in particular developing countries

• 17.17 Encourage and promote effective public, public-private, and civil society partnerships, building on the experience and resourcing strategies of partnerships

Relevant International Agreements:

• Beijing Declaration and Platform for Action (1995)
• Millennium Development Goals, 2000-2015
• Doha Declaration on the TRIPS Agreement and Public Health (2001)
• The Monterrey Consensus (2002-2008)
• The Doha Declaration on Financing for Development (2008-2015)
• Sustainable Development Goals (2015-2030)
across sectors, including:

- **Health**: For every dollar spent on primary health goods and services in 74 high-burden countries, nine dollars’ worth of economic and social benefits would be gained due to lower morbidity and mortality by 2035. This includes avoiding as many as 147 million child deaths, 32 million stillbirths, and five million maternal deaths. A later study from the Copenhagen Consensus group indicated that $1 invested in modern contraception and reproductive health services could yield up to $120 in benefits.

- **Education**: When financing for the education sector is prioritized, communities benefit. For example, each additional year of schooling for children raises national annual growth in GDP by 0.37%.

- **Reducing Poverty**: Investing in poverty reduction through social protection is good for individual health and productivity as well as economic growth. According to the OECD, a 10% increase in life expectancy increases the annual growth rate in per capita incomes by roughly 0.3-0.4 percentage points.

- **Economic Growth**: If women’s informal labor were recognized and they were to participate in the economy at the same rate and level as men, there would be a $28 trillion increase in global GDP by 2025.

- **Financial Benefits**: Companies with at least 3 women on their board in 2011 outperformed those with none, with a Return on Equity (ROE) of 10 percentage points compared to -1 percentage points and an Earnings Per Share (EPS) of +37% compared to -8% by 2016.

- **Demographic Dividend**: Many developing countries, particularly in Sub-Saharan Africa, stand to benefit greatly from investing in their young populations. Investing in young people, and particularly girls’ education and health—including access to family planning and comprehensive sexuality education—has the potential to boost economic growth. Investing in young people also requires linking education and social development to productive employment later in life. The combined demographic dividends of human capital investments and expanding opportunities for young people in sub-Saharan Africa could be enormous, amounting to at least $500 billion per year—about a third of the region’s GDP—for up to 30 years.

**SECTION 4: CALLS TO ACTION**

The very nature of building financial resources and partnerships for women requires the involvement of diverse stakeholders. While a great deal of responsibility falls on country-level authorities, businesses, donors and multilateral organizations have a critical role to play in focusing funding priorities on girls and women to reflect SDG targets and indicators. Furthermore, they must develop cross-sectoral partnerships to boost effective financing and programs, help build capacity of government authorities to effectively monitor and audit taxes and budgets, and implement quality social protection schemes to improve the lives of girls and women.

Citizens must also get involved to hold their communities, employers, regional representatives, and countries to account to develop sound, equitable budgets in line with global commitments and SDG targets, as well as to call out corruption and negligence in all sectors.

In order to power progress for all, many different constituents—governments, civil society, academia, media, affected populations, the United Nations, and the private sector—must work together to take the following actions for girls and women:

- Focus on girls and women in political and funding priorities across SDG targets and indicators, and ensure time-bound implementation of transparent, reliable funding streams that honor their commitments made in international and regional agreements.
  (Most relevant for: governments, civil society, the United Nations, and the private sector)

- Increase spending through progressive taxation and develop gender-responsive budgets in line with the SDG commitments made to girls and women.
  (Most relevant for: governments)

- Support countries to effectively monitor and audit taxes and budgets to finance SDG investments.
  (Most relevant for: governments, civil society, academia, the United Nations, and the private sector)

- Develop new partnerships across sectors to boost efficient financing and implementation of the SDGs, and examine alternative forms of financing to help meet demands.
  (Most relevant for: governments, civil society, academia, media, affected populations, the United Nations, and the private sector)

- Account for, develop, and manage sound, equitable budgets in line with funding the SDGs.
  (Most relevant for: governments, civil society, the United Nations, and the private sector)

- Call out corruption and negligence in all sectors.
  (Most relevant for: civil society)
